

Degree in Midwifery

Integrated Teaching: Internal Medicine, Surgery, Prenatal Medicine, Childbirth care

SSD: MED/13, MED/18, MED/06, MED40

Credits: 6

Responsible Professor: Gaetano Lanzetta

E-mail: gaetano.lanzetta@unicamillus.org

MODULE: Endocrinologia

SSD: MED/13

Number of Credits: 1

Professor: Aikaterini Andreadi CFU: 1

E-mail: aikaterini.andreadi@unicamillus.org

MODULE: Chirurgia Generale

SSD: MED/18

Number of Credits: 1

Professor: Massimo Villa

CFU: 1

E-mail: massimo.villa@unicamillus.org

MODULE: Medicina Specialistica

SSD: MED/06

Number of Credits: 1

Professor: Gaetano Lanzetta CFU: 1

E-mail: gaetano.lanzetta@unicamillus.org

MODULE: Ginecologia e Ostetricia

SSD: MED/40

Number of Credits: 3

Professors:

Mario Montanino Oliva

CFU: 1

E-mail: mario.montanino@unicamillus.org

Carlo Ticconi

CFU: 1

E-mail: carlo.ticconi@unicamillus.org

Emilio Piccione

CFU: 1

E-mail: emilio.piccione@unicamillus.org

PREREQUISITES

In order to follow the course profitably it is expected that students have preliminary knowledge of the basic principles of anatomy, physiology, general pathology and the physiological changes during pregnancy,

LEARNING OBJECTIVES

At the end of the course the student will be able to describe the main complications related to the different phases of a woman's life, pregnancy, and birth.

Further objective of the course is the identification of the main pathologies of interest to oncologic medicine, as well as a knowledge of the risk factors, clinical presentation, diagnostic approaches and, lastly, patient management.

Other objectives of the course are to provide the student with the knowledge of the main mechanisms of physiology and pathology of human reproduction. The student will learn the physiological reproductive process, understanding the basic biological concepts of human reproduction and alterations of the reproductive mechanisms that can cause infertility in the couple. He will know the main benign gynaecological pathologies and endocrinological disorders of the ovarian cycle that can cause infertility.

Finally, this course aims at providing the student with the sufficient knowledge of the clinical and diagnostic problems inherent in the affections of surgical relevance in the pediatric field.

LEARNING OUTCOMES

The specific learning outcomes of the program are coherent with the general provisions of the Bologna Process and the specific provisions of EC Directive 2005/36/EC. They lie within the European Qualifications Framework (Dublin Descriptors) as follows.

At the end of this teaching, students will be able to:

Knowledge and Understanding

- Describe the pathophysiological bases of the main diseases of the endocrine system and metabolism, with particular reference to gender differences, the physiology of the endocrine system and the endocrine diseases during pregnancy
- Describe the basics of oncology, be familiar with the history of cancer and symptoms and toxicity treatment related
- Describe the main congenital malformations of surgical interest (esophageal atresia, urinary tract malformations, intestinal atresia, malformations ano-rectal, congenital diaphragmatic hernia and wall defects).
- Describe the causes of the main clinical pictures that involve intestinal obstruction in the infant and infancy
- Describe the gynaecological pathologies cause of infertility
- Describe the instrumental and laboratory diagnosis of the infertile couple
- Explain therapeutic strategies in the infertile couples
- List the different techniques of ART
- Describe the causes, the symptoms, and the methods to diagnose a miscarriage and ectopic pregnancy
- Describe etiology, pathogenetic mechanisms and the clinics of the placenta during pregnancy
- List the pathogenetic mechanisms of the various types of pregnancy-induced hypertension, the clinical course of both preeclampsia and eclampsia as well as their potential impact on maternal and fetal wellbeing
- Explain the pathogenetic mechanisms, the diagnostic features, the clinical course, and impact on maternal and fetal wellbeing of gestational diabetes mellitus and of diabetes mellitus in pregnancy
- Describe the causes and preterm labor; the pathogenetic mechanisms underlying preterm labor, the diagnostic issue of preterm labor and the maternal and fetal-neonatal impact of preterm birth
- Describe the causes of the major dystocias and their effects on labor progression as well as on the fetal wellbeing
- Describe the role of prenatal diagnosis in terms of both prenatal counseling and fetal sampling
- Collaborate in the preparation of the material taken for prenatal diagnosis investigations
- Describe prenatal screening methods for chromosomopathies risk
- Explain the methods to diagnose intrauterine growth retardation
- Describe the physiopathological and clinical characteristics of the III trimester hemorrhages
- Evaluate fetal well-being in terms of laboratory tests rather than instrumental techniques
- Manage obstetric care needs that require preventive and curative skills in specific ultra-specialist sectors such as infectious diseases and trophoblast malignancy

Applying Knowledge and Understanding

- apply the principles of midwifery to selected cases, problems and a variable range of situations
- use the tools, methodologies language and conventions of midwifery to test and communicate ideas and explanations

Communication Skills

- present the topics orally in an organized and consistent manner
- use a proper scientific language coherent with the topic of discussion

Making Judgements

- recognize the importance of an in-depth knowledge of the topics consistent with a proper education
- identify the importance of a proper theoretical knowledge of the topic in the clinical practice

COURSE SYLLABUS

ANDREADI

General principles

Physiology and pathophysiology of the hypothalamic-pituitary- endocrine gland axis

Physiology and pathophysiology of the endocrine pancreas

Diabetes Mellitus: classification, pathogenesis, clinical manifestation, and medical treatment

Obesity and Metabolic Syndrome

Female and male gonad and main diseases

Physiology and pathophysiology of calcium-phosphorus metabolism of the parathyroid glands

Osteoporosis and endocrine diseases of the bone

Physiology of the thyroid gland and thyroid diseases (thyroiditis, hypothyroidism, hyperthyroidism, thyroid neoplasia)

LANZETTA

Carcinogenesis pathophysiology

Epidemiology, Etiology, diagnosis, and staging of gynecological cancer

Papillomavirus

Cancer prevention and Pap-Test

Ovarian cancer

Breast cancer

Endometrial cancer

Cervix cancer

BRCA1 and BRCA2 and genetic counselling

VILLA

Congenital malformations (head, neck, thorax, abdomen, genital and urinary tract); malformations and obstructions of the upper airways; esophageal atresia; bowel obstruction baby girl; newborn abdominal masses; acute scrotum.

MONTANINO

Anatomy of the female and male reproductive system

Human reproductive physiology: The menstrual cycle, the hormones of the hypothalamus-pituitary axis, ovarian steroid-genesis. Spermatogenesis. Epidemiology of infertility

Endocrine disorders in infertile woman: primary and secondary amenorrhea, polycystic ovarian syndrome.

Pituitary and ovarian hormone profile

Gynecological causes of female infertility, endometriosis, classification of congenital uterine malformations.

Genetic causes of male and female infertility

Instrumental diagnosis: ultrasound, monitoring of ovulation, hysterosalpingography, hysteroscopy and laparoscopy

Therapeutic approaches in infertile couple. Use of food supplements and hormones. The different assisted

UNICAMILLUS

reproduction techniques both homologous and heterologous
Italian legislation on ART

TICCONI

Physiopathology of implantation and early pregnancy.

Miscarriage: etiology, clinical forms, diagnosis, principles of treatment.

Ectopic pregnancy: etiology, pathophysiology, clinical presentation, diagnosis, principles of treatment.

Hypertensive disorders of pregnancy (pregnancy-induced hypertension, preeclampsia, eclampsia): etiology, pathogenetic mechanisms, diagnosis, principles of treatment.

Diabetes in pregnancy: etiology, pathogenetic mechanisms, diagnosis, principles of treatment.

Abruptio placenta and placenta previa: etiology, pathogenetic mechanisms, diagnosis, principles of treatment.

Preterm labor: Etiology, pathogenetic mechanisms, diagnosis, principles of treatment.

Dystocias of labor

PICCIONE

Prenatal diagnosis: prenatal counseling, non invasive methods and invasive methods.

Screening tests, meaning and role

Fetal sampling techniques

Fetal welfare assessment: Plasma and urinary indicators; Ultrasound in different times of pregnancy; The behavioral and biophysical profile; Antepartum cardiotocography

Infections during pregnancy

Intrauterine growth retardation

Third trimester bleeding

Fetal erythroblastosis

The pathology of the trophoblast: benign and malignant

The gynecological and obstetric emergency room

COURSE STRUCTURE

The course consists of 84 hours of classroom teaching, composed of frontal lessons and interactive learning activities, especially using presentations of clinical cases.

COURSE GRADE DETERMINATION

MONTANINO (written + oral exam)

Students' preparation shall be assessed by a written examination, followed by an oral test. The written exam shall be constituted by multiple-choice questions. Each correct answer shall receive one point. The final result of the written exam shall be given by the sum of the assigned partial point totals from correct answers. To have access to the oral test students must obtain a minimum of 18 points in the written exam.

MONTANINO, ANDREADI, LANZETTA, VILLA, TICCONI, PICCIONE (oral exam)

The final evaluation of the integrated course will be oral. The evaluation criteria for the oral exam will be acquired knowledge (range score: 0-8), making judgements (range score: 0-8), communication skills (range score: 0-7), learning skills (0-7). The students must be able to demonstrate their knowledge on the contents, to organize in a critical way the topics established by the program, using an appropriate language.

OPTIONAL ACTIVITIES

Students can request optional workshops to deepen some specific topics.
